PUT IT IN YOUR APP

- **onX Hunt:** On the onX web map (webmap.onxmaps.com) open My Content, choose Import and pick the .kmz. It syncs to your phone.
- **Gaia GPS:** On gaiagps.com choose Import, upload the .kmz, then open the folder in the app.
- **CalTopo:** Open a map, choose Import and pick the .kmz.
- **Google Earth:** Open the .kmz.

The file has a folder for each layer (fresh, regrowth, older, approved, walk-in zones, gates, public land, units, outline): turn them on and off in the app. Your pass link always serves the latest monthly version.

WHAT THIS IS, AND ISN'T

A dated record of where the trees were cut, from state forest practices applications, dated by satellite. It says nothing about whether you may be on a given piece of ground today: your permit, its map, gates and posted signs decide that, and active harvest units are closed to the public.
